

The world's first flexible screen

Simple, Invisible, Beautiful...FlexScreen. Enjoy the view.

Unlike traditional window screens, our flexible window screens require no installation hardware and install simply by flexing the frame with your hands. The PVC coated, spring steel frame is designed for strength and durability, and hides inside the screen track, drastically improving the look of the window and the view through it.

How Window Screens Were Meant to Be

Easy to use, great looking and nearly indestructible

EASY

Easy To Use

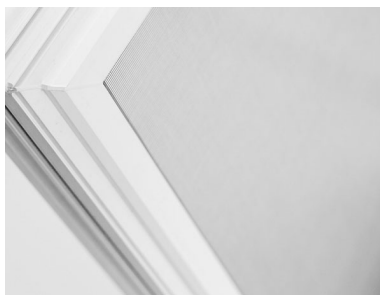

FlexScreen springs into an opening, making installing and removing the screens easy.

Easy To Clean

Traditional screens get in the way when cleaning. FlexScreen's low profile design allows water to cascade over the screen bar.

Easy To Store

Because of the low-profile bar design, 10 screens can fit into a 3 inch box!

ELEGANT

Better Looking

FlexScreens disappear in the screen frame, beautifying your window.

A Nicer View

FlexScreen provides a greater viewing area by eliminating the bulky screen bar.

A Match Made

Most screens don't match your windows. FlexScreen tucks into the window frame so there's no colors to match.

DURABLE

Dent Resistant

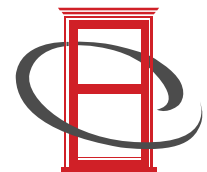

FlexScreens are tough, produced out of carbon enriched spring steel powder coated with PVC.

Break Resistant

Throw it, drop it, bend it - the frame will never dent, break or scratch.

Scratch Resistant

The tough powder coated steel resists scratching and provides protection from the extreme outdoor elements.

IDEAL WINDOW[™]
Our name says it all!
